Habitat, Tierra del Fuego (*December and February*).

This finch is common on the outskirts of the forests in Tierra del Fuego. Mr. Gould remarks, that it is nearly allied to *F. Gayi*, but it is much smaller, and is richer in its colouring.

4. FRINGILLA FRUTICETI, *Kittl.*

Fringilla fruticeti, *Kittl.* Kupf. der Vögel, pl. 23. f. 1.
Emberiza luctuosa, *Eyd. et Gerv.* Mag. de Zool. 1834. Cl. 11. pl. 71.
 ———— *D'Orb. et Lafr.* Syn. p. 80.

I obtained specimens of this bird from Northern Chile, and Southern Patagonia. I saw it also in the Cordillera of Central Chile, at an elevation of at least eight thousand feet, near the upper limit of vegetation. In Patagonia it is not common, it frequents bushy valleys in small flocks, from six to ten in number. These birds sometimes move from thicket to thicket with a peculiar soaring flight: they occasionally utter very singular and pleasing notes.

5. FRINGILLA CARBONARIA. *G. R. Gray.*

Emberiza carbonaria, *D'Orb. et Lafr.* Synop. p. 79.

I never saw this bird but once, and then it was in small flocks, on the most desert parts of the plains between the rivers Negro and Colorado, in Northern Patagonia.

6. FRINGILLA ALAUDINA. *Kittl.*

Fringilla alaudina, Kupf. der Vögel, pl. 23. f. 2.

Passerina guttata, *Eyd. & Gerv.* Mag. de Zool. 1834. pl. 70. p. 22.

My specimens were obtained from the neighbourhood of Valparaiso.
